Project Profile

McCracken Bridge in Ozark, Missouri

Project Value: \$2,500,000 to \$3,000,000
Remove bridge decking & repair bridge structure.
Also add a walking / bike trail and two pedestrian tunnels for safer use of the trails.

Project Impact Factors

- **We removed 202 feet of bridge decking in preparation for replacing it.**
- **Due to substructure repair, we had to lift the bridge off it's supports in two sections using cranes, repair the damaged steel areas, coat and paint the steel and then re-mount the two bridge sections on the substructure.**
- **Project included repouring a concrete deck on existing structure with a raised sidewalk to facilitate safer pedestrian use.**
